Protection That's Priceless

Carbon monoxide (CO) is an odorless, colorless, toxic gas that can kill in minutes. Professionally installed, monitored carbon monoxide detectors can play a critical role in saving lives. Count on Honeywell to provide your family's best defense.

Carbon Monoxide...the Silent Killer

Carbon monoxide is created when fossil fuels do not burn completely. Improperly maintained heating and cooking equipment are possible sources of carbon monoxide in the home. Vehicles running in an attached garage can also produce dangerous levels of carbon monoxide.

The Dangers of Carbon Monoxide

Carbon monoxide replaces oxygen in the bloodstream. As more and more carbon monoxide accumulates in the blood, suffocation occurs. Mild CO poisoning often appears like the flu, but more serious poisoning can lead to difficulty breathing and even death. Victims exposed to high levels of CO can become seriously ill or die in less than 15 minutes.

Carbon monoxide is the leading cause of accidental poisoning deaths in America. Yet, many people do not know they are suffering from CO poisoning until it's too late.

Why Honeywell?

Honeywell's professionally installed wireless detectors are connected to your burglary and fire system and can be monitored 24/7—providing you with an unmatched level of protection. Don't risk your family's safety with non-monitored CO detectors!

- The detectors measure CO levels over time and are designed to sound a warning alarm well before the carbon monoxide reaches a fatal level—giving you and your family time to safely evacuate your home
- Should concentrations hit dangerous levels, you will be notified by the detector, control panel and monitoring station
- Should a problem arise with your detector, the monitoring station will be alerted and quickly notify you
- Since there are no unsightly holes to drill or wires to run, the wireless design preserves the beauty of your home while protecting your loved ones

Honeywell's Wireless Carbon Monoxide Detectors can help you safeguard your loved ones from this silent killer—delivering the protection and peace of mind you deserve.

Everyone is at risk for carbon monoxide poisoning. Infants, children, pregnant women, senior citizens, pets and people with a history of anemia, heart or respiratory disease are especially vulnerable.
